

## Design and Build

OFD oak frame buildings, designed and finished to exceptional standards, provide comfortable homes, magnificent pool and leisure buildings and creative outbuildings.

Let your individuality show by using our experience, professional resources and workshops to provide not only the structural frame but also carefully made joinery items crafted to provide that visible difference in design and quality.

Chose from self-assembly to complete 'turn-key' contracts from design to completion.

We are happy to participate in Architect led projects and can usually contribute practical ideas and economy in constructing the oak frame if we are involved in the early stages.

# Advantages of an Oak Frame

1. Able to blend in with any environment. By cladding in weatherboard, stone, brick, slate, tiles or thatch it can have a true regional visual identity.
2. Immensely versatile. We can build any Oak structure to suit your needs. Our architects can design your building or work with your own architects and builders.
3. Provide character and quality which immediately enhances comparative value.
4. An excellent way of creating living, office or studio space with total flexibility to amend internal areas as needs change.
5. Virtually maintenance free, mellowing to silver grey outside and pale honey colour inside.
6. No toxic preservative treatment needed. Oak is a naturally durable, environmentally sound material.
7. Easy to insulate to a high standard. Can meet all planning constraints, building regulations and fire regulations
8. Construction programmes are always faster than traditional building with resulting cost savings
9. Bespoke designs are available without attracting the 'one-off' premiums expected.
